

Accurate Surgery Instruments

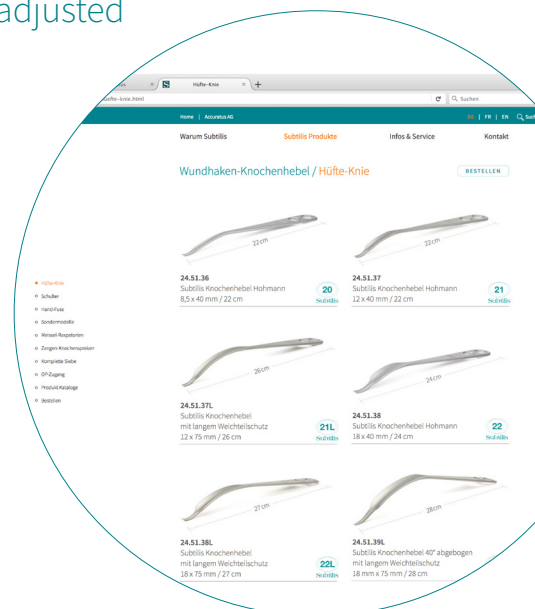

Subtilis®  SWISS
MADE

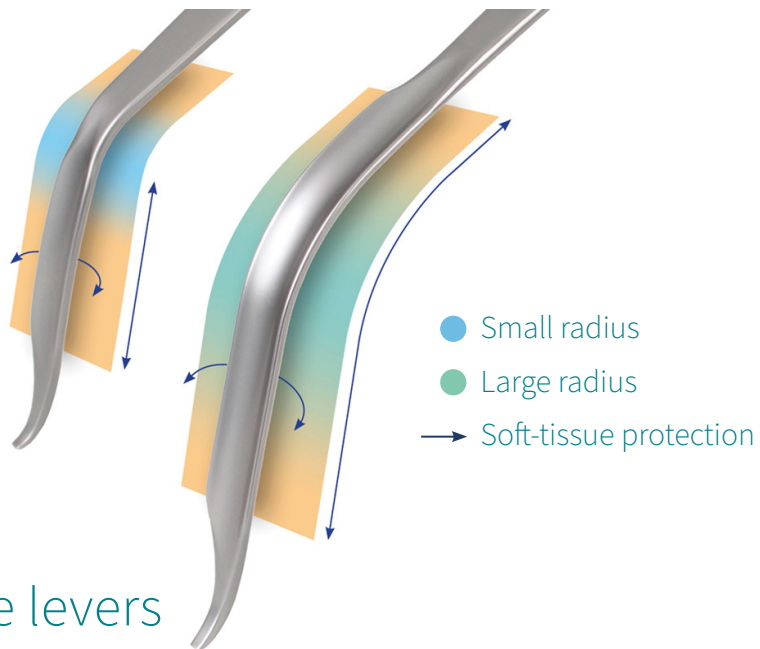

Why Subtilis®

- Although soft-tissue protection is a paradigm in surgery, which contributes significantly to the result and is repeated countless times, in reality it is only rarely followed.
- The philosophy of the trend-setting brand Subtilis is to develop surgical instruments which are optimal for the surgeon.
- The original has the ideal cutting angle, is perfectly adjusted to operating techniques and as tissue conserving as possible for the patient.
- Sophisticated surgery techniques require subtle instruments.

Advantages of retractors - bone levers

- The tissue-conserving hollow geometry reduces soft tissue trauma
- The sophisticated design ensures optimal access in tight-spaces MIS
- Anti-glare surface
- Subtilis models with long soft-tissue protection improve access and are even more tissue conserving. The second angle ensures an optimal view of the operating field.
- By means of the two inter-connecting radii the pressure is distributed over muscles and soft tissue optimally
- We provide these models with long soft-tissue protection specifically for hip surgery
- For atraumatic, tissue-conserving surgery, the use of Subtilis is a must!
